

PRF EZ Gel Undereye Treatment

What Is PRF EZ Gel?

PRF (Platelet-Rich Fibrin) EZ Gel is an **advanced regenerative treatment** that uses your body's own growth factors to improve the appearance of **under-eye hollows, dark circles, and skin texture**—without the use of synthetic fillers. It's natural, effective, and especially popular for delicate areas like the tear troughs.

How Does It Work?|

We draw a small amount of your blood, similar to a routine lab draw.

The blood is processed in a centrifuge to isolate the **platelet-rich fibrin**.

We gently heat and cool the PRF to create a **gel-like consistency**, ideal for injection.

The PRF EZ Gel is **injected under the eyes**, stimulating collagen and elastin production, improving skin quality over time.

What to Expect During Treatment:

Appointment Time: Approx. 45–60 minutes

Numbing: A topical numbing cream may be applied for comfort

Sensation: Mild pressure or pinch during injection

Downtime: Minimal, but swelling or bruising may occur

Recovery & Results:

Swelling & Bruising: Normal and can last 1–7 days

Onset: Gradual improvement over **2–6 weeks**

Longevity: Results can last several months; we typically recommend a **series of 3 treatments**, spaced 6–8 weeks apart

Best Practices: Stay well-hydrated, avoid heat and strenuous activity for 24–72 hours, and follow your provider's post-care instructions.

Is PRF Right for Me?

PRF EZ Gel is ideal for:

- ✓ Under-eye hollows or dark circles
- ✓ Patients seeking a **natural alternative to filler**
- ✓ Those with mild to moderate volume loss
- ✓ Individuals not pregnant or breastfeeding, and without active infections or bleeding disorders
